HEALTHCONNECT

Medical Image Exchange

Access, View, and Share Your Patients' Medical Images in the Cloud

Medical Images—When and Where You Need Them

Healthconnect offers a convenient and simple way to access, view and share medical images in real-time. In partnership with DICOM Grid, our cloud imaging provider, Healthconnect puts medical images right at your fingertips—when and where they are needed. Convenient access to studies offers compelling advantages over the “CD shuffle” and can help you deliver more cost-effective and timely care.

Query for Preexisting Images and Exchange Images

- Immediate electronic exchange of medical images with other physicians
- Notification of historical images existing in the community record
- Query for reports and images whether known or unknown
- Ability to forward images to other physicians even if they are not a subscriber of the service

Medical Image Sharing Will Benefit Your Practice:

- Eliminating the expensive and time-consuming process of transferring images on CDs
- Minimizing redundant imaging, which often is not reimbursable and exposes patients to unnecessary radiation
- Access to prior imaging studies
- Reducing delays in care caused by missing studies
- Simplifying patient transfers involving imaging with non-affiliated organizations.

Simple, Secure Access

Authorized physicians and administrators can query and retrieve to find patient images and associated reports, launch studies in a clinical, zero-footprint install viewer, download studies to a local PACS, and leverage sharing functionality—all from one centralized location. You will also have the ability to send images to out of network providers.

Your Patients' Images Are Protected

The solution is built upon DICOM Grid's patented Split-Merge technology, which allows imaging data to be securely uploaded, archived, and viewed remotely and/or transported wherever and whenever it is needed.
